

# Custom Proposal Web Integrated Network System / ESPEC OnlineCORE Add-On ESPEC OnlineCORE RAID model

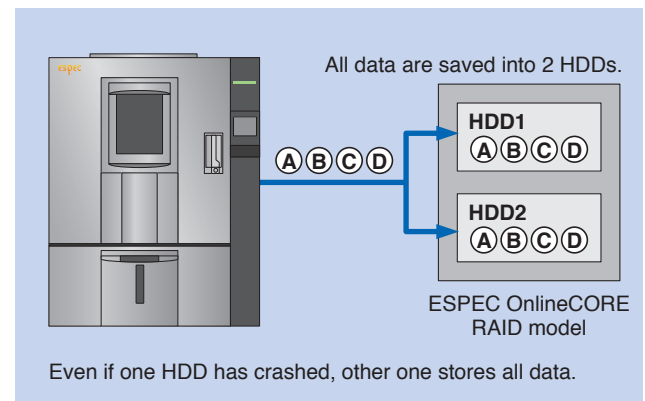

ESPEC OnlineCORE saves huge test data for all connected equipment for several years in its HDD. And it saves schedules, operating rate and initial setting also. The data must be protected from unexpected problem.

Now we propose the “RAID model (mirroring: RAID1)” which duplicates all important data into second HDD is installed in it. No more need external data server.

Even if one of HDD is crashed, do not worry other one keeps storing all data.

The slot-in HDD makes easy repairing and copies all data in the past automatically.

Retrofit is available into ESPEC OnlineCORE you are using.

ESPEC OnlineCORE data RAID model protects all data from unexpected HDD crash by itself.
